

Cost per lead is a lie

The only number that pays your mortgage is cost per booked JOB.

02

CPL hides the close rate

A \$35 lead you win 1-in-12 times isn't cheap — it's \$420 a job before you swing a hammer.

03

Do the real math

Angi $\approx$ \$542 a booked job. Thumbtack $\approx$ \$250. Google LSA $\approx$ \$168. Same trade, wildly different truth.

04

Cheap means a bidding war

Shared leads go to 5–12 pros. You're not buying a customer — you're buying an at-bat against 8 other trucks.

05

Track it per channel

Ad spend ÷ jobs booked, monthly, per source. Kill what loses. Feed what wins.

Know your number.
